

Roulette

Roulette is a very popular game all over Europe and North America. Each player receives different colour chips and places them on the betting table.

Object of the Game

To predict where the ball will come to rest on the roulette wheel.

How To Play

The roulette wheel consists of numbers 1 through 36, alternately coloured red and black plus 0 which is green. Inside bets are made with non-value chips, which can be purchased from the dealer prior to placing your bet. Outside bets are made with value chips or non-value chips. To bet, simply place your chips on the numbered layout. See the layout diagram and odds chart for examples of bets and the corresponding payouts. Once the ball comes to rest, the dealer marks the winning number on the layout and pays all winning bets.

Roulette Chips

Non-value chips or roulette chips can be purchased from the dealer. Unlike other casino games, you get to choose the value of the chips. For example, you can choose \$1, \$2 or \$5 chips. The chips you receive will also be a unique color to all of the other players and will only be valid at that table.
